

## MAINSAIL & MIZZEN

For modern square top & parabolic mainsails use the leech end of the top angled batten (D) to measure the perpendicular to ML1 to find the measurement HB  
For older 'pinhead' style sails, A D is the width of the headboard

$P = A B$

$E = B C$

$ML1 = A C$

$ML2 = D C$

$LPM = B \text{ to } ML1$

$HB = D \text{ to } ML1$

$er = \text{Max. depth of round to } BC$

$Pr = \text{Max. depth of round to } AB$

$rdm = \text{Max. depth of round to } DC$

$MC = \text{Mast circumference (Rotating mast only)}$
