

OMR Measuring Guide

SCREECHERS

The Mid Girth (DE), must be greater than 50% of the Foot Length (BC), but less than 75% of the Foot to be valid

Owner: _____

Yacht: _____

NOTE:
For screechers with newer lightweight low stretch fabrics, if foot 'round' is still present when the screecher is tensioned between 'B' & 'C', then the correct measurement for SF, (BC), is around the tape edge.
Likewise for the Luff & Leach.
